

# Raja Ampat and Triton Bay

**UNSPOILT DIVE SITES, SOFT & BLACK CORAL GALORE, NEW SPECIES  
PHOTO OPPORTUNITIES, THE LAST FRONTIER, NON-STOP PYGMY  
SEAHORSES, WARM WATER, LAGOON-SIGHTSEEING, RIVER CRUISING, ROCK  
ART PAINTING, PEARL FARM.**

## DAY 1

Welcome on board. The MANTA MAE CREW will await your arrival at Sorong Airport to assist and accompany you on board KLM MANTA MAE at Sorong Harbour, only a short drive of around 10-15mins away. Our experienced staff will look after your luggage and transfer it to your cabin onboard KLM MANTA MAE while you enjoy our "refreshing welcome drink". you will be introduced to our team and have plenty of time to settle in, get everything ready and enjoy life onboard with us. we will start navigate to south Raja Ampat - which is 12-13 hours navigates .

DAY 2

## *Wagmab / Farondi*

Breakfast in the morning prepared by our chef , we plan to do check dives in Wagmab or Farondi Area

Lunch will be on board and afternoon activities could be in the sand bank or another diving .

Evening navigates to Fiabacet / Boo Area  
4-4 dives

DAY 3

## *Fiabacet / Boo*

Not to be missed, “Boo Rock”, the gully called “The Windows”, where two rocks connected by magnificent soft corals and sizzling with fish. The surface crashes through the top of these window arches creating a constant pounding noise, which can be felt through your whole body. The fish life is outstanding with jacks and dogtooth tuna feeding in the surge and schooling bannerfish sitting behind sea fans catching tiny bits of plankton floating in the current. Hardly a spot on the reef is left uncovered by sea fans, soft coral and thick schools of baitfish.

## DAY 4

### *Daram*

One of the most radiant reefs in all of The 4 Kings, each dive is never an ordinary dive, it's always special and there's always a new scene to be found. The reef is covered in short growth pastel soft corals that form larger purple and pink soft coral, red and white sea fans and enormous barrel sponges jutting out from the steep slopes and walls. Excellent fish life: Fusiliers, surgeonfish, small schools of barracuda and profuse schools of anthias all milling about in the rising and falling tides. Navigates to Pulau Pisang , which is between misool and fak fak

DAY 5

## *Pulau Pisang*

Midway between Fak Fak and Triton Bay's calm waters, sheltered by a hard coral-dominated reef, where Dr. Gerry Allan broke his record for the most species counted on a single site, lays 2-3 dives and will navigates again to Tanjung Papisoe

## *Tanjung Papisoe*

Midway between Fak Fak and Triton Bay's calm waters, sheltered by a hard coral-dominated reef, where Dr. Gerry Allan broke his record for the most species counted on a single site, lays Tanjung Papisoi, with 330 species – also the name of the dive site. The reef is nothing spectacular as such but on the other hand, the many different kinds of fish species are.

## *Triton Bay*

Triton Bay, a place where scientists have recorded a total of eight different mantis shrimp species, 24 new fish species, and 20 species of coral that are new. Many are believed to be endemic to the region, meaning that they are found nowhere else on Earth. Scientists also first spotted the new species of two kinds of epaulette shark (the walking shark) here – small, slender-bodied bottom-dwellers that use their pectoral fins to "walk" across the seafloor, mostly at nighttime. This area is known for its underwater beauty and extensive biodiversity.

## DAY 7 - 9

Larry's heaven is without a doubt one of the most beautiful places ever and has been given its name by the late Larry Smith. As soon as you plunge into the water, the colors and the sheer diversity you encounter will blow your mind away! Fields of soft coral, a thick forest of black coral trees, sea fans and hard coral all dominant the reef and there is hardly a bare spot on these boulders. It is very special when the water rushes through this channel and it springs to life. Fish, fish and fish are just everywhere, all kinds, and all sizes, a true "Heaven on Earth".

, Aiduma

An island outside the mouth of Triton Bay contains a mixture of deep basins and shallower waters. Every inch is occupied by some type of invertebrate and there's an abundance of tunicates and encrusting sponges with soft and hard coral. This is a Triton bay dive site with huge groupers, jacks, mackerels and tasseled wobbegongs in abundance. But there's not only big fish that light up the reef, small critters are found on every corner too.

## DAY 10

An island outside the mouth of Triton Bay contains a mixture of deep basins and shallower waters. Every inch is occupied by some type of invertebrate and there's an abundance of tunicates and encrusting sponges with soft and hard coral. This is a Triton bay dive site with huge groupers, jacks, mackerels and tasseled wobbegongs in abundance. But there's not only big fish that light up the reef, small critters are found on every corner too.

## DAY 11

Time to say goodbye ,  
our crew will assist you to Kaimana Airport , UTAROM  
Airport .

Joep to welcome you on board again in other  
destination

All divesites and route are subject to change due  
weather , conditions and currents

# The End
